

It's a changing world.

And there's never been
a better time to change to LPG.

The Auto Edge difference. Get the edge.

Nobody knows more about LPG (auto gas) engine conversions than the team at Auto Edge.

It's not something we dabble in as a sideline, we are experts and passionate about LPG engine conversions.

In nearly a decade we have successfully converted thousands of vehicles of all makes and models.

Just as important, we just don't install and send you on your way. We are here every step of the way to provide ongoing service to your vehicle.

We guarantee all our work and back it up with a fully transferable 3 year, 100,000 km, national warranty. Now that's true peace of mind motoring.

All of our auto technicians are highly trained to the highest Australian standards in LPG installation.

We are affiliated with ALPGA (Australian Liquefied Petroleum Gas Association) as well as being a licensed and Kleenheat approved LPG installer.

Best of all we are proud of the fact we've been able to save thousands of West Aussies, millions of dollars on their total fuel bills over the years.

So, choose Auto Edge and get ready to laugh all the way to the tank...

How much does it cost? How much will I save?

You are about to make an investment in economical motoring and the good news is LPG will return that investment over and over again.

Prices start from around \$2500; however generous government subsidies mean you can pay a substantially reduced price or end up paying no cost at all for standard installations.

Think about it.

There's never been a better time to install an Auto Edge LPG conversion.

Laugh all the way to the tank.

LPG is consistently up to 40-60% cheaper than petrol or diesel fuel.

You'll actually be getting change out of a dollar, something that's never likely to happen again with fossil based fuel.

What will you do with the money you save?

Is LPG safe?

To put it bluntly, there is more chance of a petrol engine igniting in a crash than a LPG vehicle.

An Auto Edge installed LPG system has a number of important safety features including:

- A 3mm welded steel pressure cylinder which is stress-tested to many times its normal operating pressure prior to being installed.
- Two electronically controlled shut-off solenoids (on cylinder and under bonnet) which stop the flow of gas to the engine if the engine stops for any reason. Some of our systems have three solenoids.
- Pressure relief valves for the tank and the system, to prevent any pressure build up that may damage the system, or be hazardous.
- Double back-check valves to ensure gas tight filling.
- Sealed compartments and venting around valves and pipe-work to ensure no LPG enters the interior of the vehicle.

Thousands of motorists in Australia including just about all Taxi fleets enjoy safe LPG motoring everyday.

Will LPG affect my engine?

In short. NO. LPG actually reduces engine wear and tear.

Running your engine on LPG is beneficial to your car. LPG is a cleaner burning fuel than petrol, so engine life is actually extended. There is less sludge build up in the engine and your engine oil will always look clean. Engine oil and spark plugs need changing less often when running on LPG, so service intervals can be increased.

Can I still retain my existing fuel tank?

YES. You can have a dual system that allows you to retain your existing fuel or diesel tank.

Is it compact?

The tank system is designed to take up a minimum amount of space in your boot. You will still be able to pack your boot with most things like groceries, luggage, sports equipment etc. But think of it this way. The little amount you will lose in your boot will be more than made up by the savings in your pocket.

What about my engine performance?

Modern LPG engine technology provides performance and fuel economy comparable with contemporary petrol-powered engines.

Can LPG be installed to diesel engines?

YES. It can on 4 wheel drives and light trucks. You can have a dual system that uses a mix of both LPG and diesel, providing more power and torque. You can also expect a reduction of up to 20% in fuel costs.

Can I buy LPG easily?

YES. There's over 3,200 outlets Australia wide with more providing LPG everyday. You can travel throughout Perth and WA or from Perth to Sydney and never be caught short finding a place to fill up on LPG.

Is it clean?

LPG powered vehicles emit significantly fewer greenhouse gases and other pollutants than petrol-powered equivalents. So, you'll be saving money on fuel as well as the environment.

Will my LPG vehicle be expensive to service?

NO. In fact, at Auto Edge when you have your normal car service done we will check your gas system as part of vehicles routine maintenance.

I've heard LPG engines can backfire?

Once upon a time they sometimes did. However that was using yesterday's technology. These days LPG converted engines utilize what is called SGI or Sequential Gas Injection, meaning backfire is a thing of the past. Not only that, you will find that your vehicle runs quieter and smoother.

Can LPG be installed to new and older vehicles?

LPG can be installed to most vehicles. Sequential Gas Injection (SGI) also means that drivers of today's current models, more than ever before, can also enjoy the benefits of LPG.

Will it affect the value of my vehicle?

No. LPG vehicles are in huge demand on the used car market.

WHY?

The answer is simple. They cost far less to run and save motorists more in the long run. Wouldn't you rather buy a vehicle that can cost less to run?

Does it take long to install?

Not really, usually it can take 36 – 72 hours to do the job right. And then you can enjoy many years of safe, reliable, money saving performance.

LPG: FACTS REPORT

Auto Edge your LPG motoring partner.

There are LPG conversions and then there's an Auto Edge Conversion.

Make sure you are getting the best system for your car, insist on Auto Edge. Here's why...

- Industry leader for nearly ten years in LPG installation
- Fully qualified LPG auto technicians
- We make it easy to apply for your Government rebates
- Latest technology and equipment
- Thousands of satisfied customers
- Full on-going service support
- We provide all other aspects of mechanical repairs and servicing
- All work 100% guaranteed
- 3 year, 100,000 km Australia-wide warranty at no extra
- On-site tank testing
- Kleenheat approved LPG installer
